

Figure 5-3 While motor development is orderly and sequential, there are still individual differences. The left end of the bar represents the age by which 25 percent of infants have reached the stated performance. The right end represents the age by which 90 percent have accomplished the behavior. The vertical marks indicate the time by which 50 percent have accomplished the behavior. (Frankenburg, W., and Dodds, J. B. The Denver developmental screening test. *Journal of Pediatrics*, 1967, 71, 181-91)
